CEGA SYSTEMS BY GREGGERSEN

there is no substitute

there is no substitute

As it is in nature, so it is in technology: the value of experience shines through.

GREGGERSEN

THE GREGGERSEN BRAND

For three generations, Greggersen has made a name for itself as a specialist in the handling of critical and compressed gases. More than 100 employees work in the key areas of medical technology, CEGA Systems (Central Gassupply Systems) and welding equipment.

As manufacturers of technical gas equipment and life-support systems, we accept only the best possible quality. Greggersen guarantees perfection and reliability. We are a full-service gas supplier, and offer

advice, planning, development, production, installation, maintenance and servicing.

What Hans Greggersen established as a welding repair service in 1924 has today become an international authority on CEGA. Company inventions, numerous patents and a successful internationalisation testify to the success of the Greggersen brand and its excellent relations with its customers.

Any technical product is only
as dependable as the person
who makes it.

MANUFACTORY GREGGERSEN

All our products are made exclusively in Germany. This is the only way we can guarantee that each part matches perfectly and we can step in to make on-the-spot corrections if needed.

With over 100 highly qualified employees, and vertical integration of up to 80%, we retain our CEGA know-how within the company and can therefore actively ensure the outstanding quality of our products.

We only use the best materials in our manufacturing, and our use of these resources show sure instinct and expertise. Our customers prize this perfectionism it makes a solid basis for long-term and successful partnerships.

When you cross timeless beauty with superior technology, an extraordinary thing arises.

BEAUTY

Especially we hold our products to the highest quality standards, because we know how important technical reliability is when it comes to CEGA systems. These high standards are not just for the technology on the inside – they are also shown in the design on the outside.

Greggersen products are masterpieces of aesthetics that deliver just what their appearance promises: perfect function,

maximum reliability, accessible comfort. True beauty comes from within. This is visible in both, the larger systems and the smallest details.

The outstanding demand for Greggersen manufacturing worldwide is due to the harmony between technology and aesthetics.

```

Modus / Gasart: 2 Quelle
Sensor/Schalter: Sensor
Relais invertiert: Nein
Fl./Tank min/max: 8.0 20.5
Netzdruck min/max: 4.5 5.5
Sprache: Deutsch
Sensor li/mi/re/N: 250 250
  
```

We are always striving to take our technology further – but we do so out of enthusiasm, rather than a desire to look good.

HIGHTECH

Patients always rely on constant supply of medical gases. Their health depends upon it – and often their lives do too.

Greggersen CEGA systems are state of the art, and often even a step ahead of that. Only those who continue developing, testing and installing high-tech innovations can guarantee a smooth course in the future.

Modern concepts are based on the centralisation of gas supply sources: oxygen,

nitrous oxide and carbon dioxide are provided in cylinders or liquid tanks, with air pressure and vacuum pressure achieved using compressors and pumps. All of these complex processes require know-how, experience, and uncompromising technology in the selection and construction of materials, as well as in hardware and software development.

Perfection is a high standard, one that can only be fulfilled if function and aesthetics develop in tandem.

PERFECTION

All of our employees know that they are accountable to the patients who use our products. We guarantee certified quality, rigorously examine every link in the production chain, put solutions to the test and improve our products, it is the people that make the difference.

This is why Greggersen inspects each piece several times by hand. Most of our raw materials consist of 100% recyclable metals, such as brass and copper. We find

consideration for the environment to be a fundamental sign of quality.

We design our products so that they will enjoy a long life, and that maintenance will be straightforward and affordable. We also put great value on ergonomics and ease of use.

Offering perfect products is an extremely high standard, which is the goal of every Greggersen employee, every day.

In a world where offerings grow more and more similar, we emphasize individuality that is fitted to our customers' needs.

INDIVIDUALITY

We tailor our offerings to our customers because we work close together to find solutions. We understand their problems and their particularities, whilst keeping in mind, the big picture and the small details.

This is as true for products as it is for services. And it applies not only to what we produce, but also to how we produce it.

Greggersen knows each customer's needs and attends to them with care and with professionalism. Whether we are designing the architecture of a network or arranging visible elements from glass, metal or other materials in close consultation with the customer, our products are always made to individual specifications.

Each of our components functions at 100%, but the system is not perfect until we have delivered every part, installed and serviced it.

SYSTEM

When all of the parts of a system are carefully coordinated with one another, its functionality increases, and a loose bunch of instrumental soloists becomes an orchestra playing in harmony.

Greggersen uses a flexible system to plan, realise, optimise and maintain the highly complex equipment used in CEGA. The use of intelligent components and clearly defined processes shows that the highest level of function can be guaranteed at all

times. This also testifies to our rapid speed of innovation. We modernise our technology as quickly as possible, always with our customers in mind.

We offer full service – everything from manual labour to computer-aided manufacturing processes. Our system is continually evolving, but always remains backward compatible, making it work easier for our customers.

Anyone who wants to deliver
outstanding quality must work with
the very best partners.
In close contact, eye to eye.

GREGGERSEN PARTNERS

The exclusive quality of our products is an obligation to apply our high standards everywhere. We therefore place strict criteria on the selection of our co-operation partners. Greggensen is proud to co-operate only with first-class specialists such as Fred Held, one of the leading industrial designers in medical technology.

All of our german partners and providers share our emphasis on equality, openness and mutual trust. This is the only way that each partner can benefit from the other that each of our customers can benefit from a well-practised team.
